# CORPORATE PRESENTATION

(NASDAQ:FWBI)

***Targeted, Non-Systemic Therapeutics for Gastrointestinal Diseases***

# Company Disclaimer

*Certain statements in this presentation constitute “forward-looking statements” within the meaning of Section 21E of the Securities Exchange Act of 1934, as amended. Any statements that refer to expectations or other characterizations of future events, circumstances or results are forward-looking statements. Such forward-looking statements include projections. Such projections were not prepared in accordance with public guidelines of the American Institute of Certified Public Accountants regarding projections and forecasts, nor have such projections been audited, examined or otherwise reviewed by independent auditors of the company. Such forward-looking statements involve known and unknown risks, uncertainties and other factors which may cause the actual results, performance or achievements of the company and its clinical trials to be materially different from any future results, performance or achievements expressed or implied by such forward-looking statements.*

*The views expressed are those of management and are based on currently available information. Estimates and projections contained herein have been prepared by management and involve significant elements of subjective judgment and analysis and are based on certain assumptions. No representation nor warranty, expressed or implied, is made as to the accuracy or completeness of the information contained in this document, and nothing contained herein is, or shall be relied upon, as a promise or representation, whether as to the past or the future. The projections are not intended to follow generally accepted accounting principles. Neither our accountants nor our legal counsel have compiled, audited, prepared, or contributed to the projections or the underlying assumptions. None of these parties express an opinion with respect to the projections.*

*You are cautioned not to place undue reliance on these forward-looking statements. Except for ongoing obligations of the company to disclose material information under the federal securities laws, the company does not undertake any obligation to release any revisions to any forward-looking statements, to report events or to report the occurrence of unanticipated events.*

## Overview

### Three therapeutic assets and multiple Phase 2-ready clinical indications

**First Wave BioPharma** is a clinical stage biotechnology company currently focused on the development of targeted, non-systemic therapies for gastrointestinal diseases

#### ADRULIPASE

**Recombinant enzyme; lipase biologic for the treatment of Exocrine Pancreatic Insufficiency (EPI)**

- EPI in Cystic Fibrosis (CF) and Chronic Pancreatitis (CP); new enteric microgranule formulation
- Phase 2 Bridging Study initiated Jan. 2023, topline data 2H'23

#### CAPESEROD

**Re-purposed selective 5-HT4 receptor partial agonist for gastrointestinal indications**

- Pediatric Ulcerative Colitis
- Gastroparesis

#### NICLOSAMIDE

**Re-purposed small molecule drug with potent anti-inflammatory properties, proprietary micronized formulation**

- IBD: Ulcerative Colitis-Ulcerative Proctitis
- Immune Checkpoint Inhibitor-Associated Colitis

**Robust IP portfolio covering method, formulation and use indications; key patents secure for 15-20 years**

**Pipeline of gut-targeted GI therapies address significant unmet medical needs in billion-dollar markets**

# First Wave BioPharma Management Team

Combined Experience in Developing and Launching more than 25 Drugs

**James Sapirstein**  
Chief Executive Officer

- Led Gilead's launch of Tenofovir/Viread
- Director of BMS International Infectious Disease Group
- Founder of Tobira, sold to Allergan for \$1.7B

**Sarah Romano**  
Chief Financial Officer

**Martin Krusin**  
SVP Corporate Development

## **ADRULIPASE**

Exocrine Pancreatic Insufficiency in  
Cystic Fibrosis & Chronic Pancreatitis

## **CAPESEROD**

New GI Orphan Disease Opportunity  
In-Licensed from Sanofi

## **NICLOSAMIDE**

Non-Steroidal, Anti-Inflammatories for  
Mild-to-Moderate IBD

# Adrulipase: Exocrine Pancreatic Insufficiency (EPI)

A chronic nutritional deficiency – the pancreas is damaged and does not produce the digestive enzymes needed to break up food in the GI tract so that nutrients can be absorbed

## EPI related morbidities

- Poor fat absorption
- Unable to gain or retain weight
- Frequent bowel movements & diarrhea
- Abdominal discomfort and pain

## Focus on two patient populations requiring treatment for EPI

### Cystic Fibrosis

#### Genetic disease

- ~40,000 patients U.S.,  
~100K-160K\* worldwide
- Treatment begins for patients in first six months of life

### Chronic Pancreatitis

#### Heterogeneous disease

- ~95,000 patients U.S.,  
~450K-600K worldwide
- Alcoholism
- Pancreatic cancer
- Pancreatic surgery

Sources: Guo, J. Worldwide rates of diagnosis and effective treatment for cystic fibrosis, Journal of Cystic Fibrosis 21(2022) 456-462 – estimate of ~ 60K undiagnosed individuals with CF. Cystic Fibrosis Foundation 2023. The CorStar Group 2019.

# Adrulipase: Large Established U.S. Market Of ~\$1.7 Billion<sup>(1)</sup>

All lipase products are pig derived and are less active at the pH in humans resulting in a large pill burden

- U.S. Market Growing at 16% CAGR
- Global PERT market size >\$2.2 billion

Top 4 PERT Players U.S.)	
<span style="color: blue;">■</span>	Creon (AbbVie)
<span style="color: yellow;">■</span>	Zenpep (Nestle)
<span style="color: grey;">■</span>	Pancreaze (Vivus)
<span style="color: darkgrey;">■</span>	Pertzeye (Chiesi)

Sources: Global Market Size: Symphony Health 2019. The CorStar Group (2019). U.S. Market Size: Creon 2013-2023 AbbVie 10-K's, 2021 Mgmt. Estimate; Zenpep, Allergan 2014-2020 10-Ks, 2021 Mgmt. Estimate; Vivus and Pertzeye.

# Adrulipase: Fulfilling an Unmet Medical Need

	PERT	ADRULIPASE
Drug Substance	<ul style="list-style-type: none"> <li>▪ Porcine-derived pancreatic enzyme replacement therapy (PERT)</li> </ul>	<ul style="list-style-type: none"> <li>▪ Recombinant yeast (<i>Yarrowia lipolytica</i>) lipase-derived replacement therapy</li> </ul>
Safety	<ul style="list-style-type: none"> <li>▪ Adverse event: fibrosing colonopathy at high doses</li> <li>▪ FDA black box warning</li> <li>▪ ~30% of CF patients are not well controlled on PERT</li> </ul>	<ul style="list-style-type: none"> <li>▪ Safe and well tolerated to date</li> <li>▪ No fibrosing colonopathy</li> <li>▪ No porcine allergies</li> </ul>
Pill Burden	<ul style="list-style-type: none"> <li>▪ 25-40 pills per day (CF)</li> </ul>	<ul style="list-style-type: none"> <li>▪ 5-8 pills per day (CF)</li> </ul>
Sourcing & Supply	<ul style="list-style-type: none"> <li>▪ Subject to pig herd management</li> <li>▪ Risk of transmission of animal pathogens</li> <li>▪ Manufacturing + supply chain inconsistency</li> </ul>	<ul style="list-style-type: none"> <li>▪ GRAS (Generally Regarded as Safe)</li> <li>▪ No risk of animal pathogens</li> <li>▪ Manufacturing + supply chain consistency</li> </ul>

**Differentiated mechanism of action** | **No dose-limiting safety issues to date on ~100 patients**

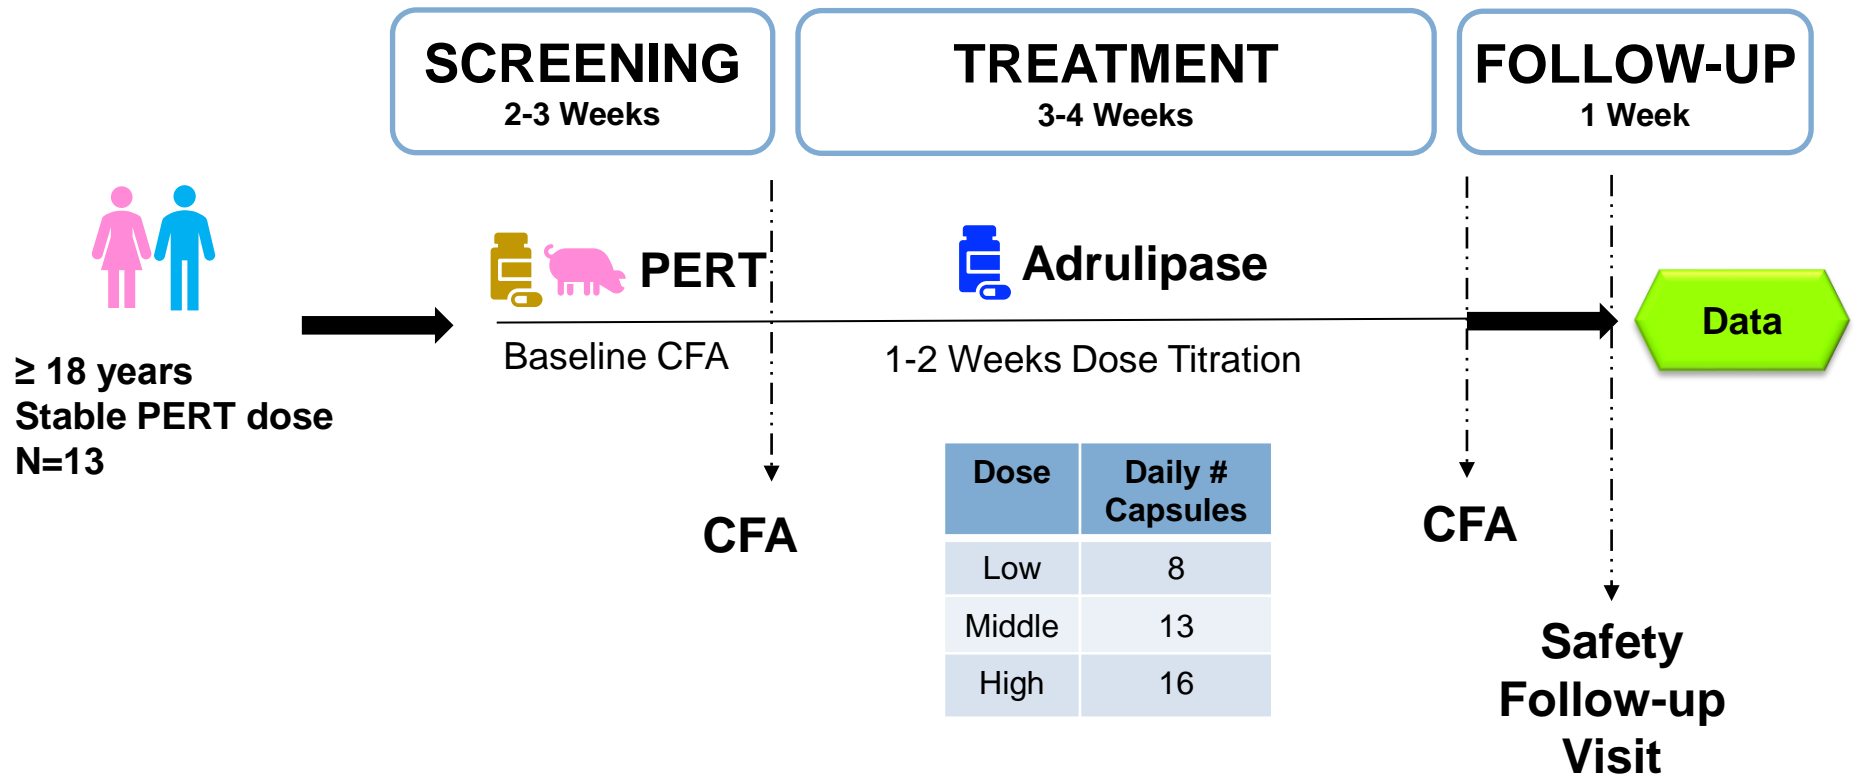

Sources: Results from the Company's clinical trials, internal studies and management estimates.

# Adrulipase: Phase 2 SPAN Bridging Study

Trial Initiated Jan. 2023, Completed July 2023

A Phase 2, Open Label, Multicenter, Pilot Study to Assess Safety and Efficacy of an Enteric Microgranule Formulation of Adrulipase in Patients with Exocrine Pancreatic Insufficiency (EPI) due to Cystic Fibrosis (CF)

## Adrulipase: Summary

- Targeting patients with **Cystic Fibrosis (CF)** and **Chronic Pancreatitis (CP)**
- Addressing an established PERT global market (>\$2 billion)
- **Recombinant alternative to porcine pancreatic enzyme replacement therapy (PERT)**
- **A safer and more convenient therapy with a reduced daily pill burden**
- **Pursuing parallel monotherapy and combination therapy clinical pathways**
- **New enteric microgranule formulation developed**
- **Phase 2 bridging study completed, topline data July 2023**
- **Full data read-out, year-end 2023**

## Capeserod: Unique Mechanism of Action Applicable to New GI Indications

- Capeserod, a selective 5-HT4 receptor partial agonist, was in-licensed from Sanofi in September 2023
- In previous Sanofi Phase 1 and Phase 2 CNS trials, involving over 600 patients, Capeserod appeared safe and well-tolerated
- Research on Capeserod and subsequent artificial intelligence (AI)-empowered analyses suggest that the drug possesses a unique mechanism of action that is applicable to several GI indications underserved by currently available therapeutics in multi-billion dollar markets.
  - Pediatric Ulcerative Colitis
  - Gastroparesis
- First Wave will repurpose Capeserod for gastrointestinal (GI) indications and plans to initiate a Phase 2 clinical development program
- Sanofi retains the right of first refusal (ROFR) to develop and commercialize Capeserod

## Niclosamide: Significant Unmet Need in IBD

### Large Multi-Billion Dollar Mild-to-Moderate IBD Market Opportunity

- Large Mild-to-Moderate market size (U.S.)<sup>2</sup>

Mild-to-Moderate	Prevalence	Market Size
Ulcerative Colitis	~700K	\$4.6B
Crohn's Disease	~500K	\$4.3B

- Current mild-to-moderate treatments are ineffective: 5-ASA (oral, rectal, or both together) in the hope of inducing and maintaining remission
- Remission fails to occur in patients all too often
  - ~54% fail remission with oral 5-ASA<sup>3</sup>
  - ~59% fail remission with rectal 5-ASA<sup>4</sup>

## Niclosamide: Ideal profile for a GI-targeted agent

Multiple Phase 2 ready IBD indications

- **FDA approved (1982) small molecule anthelmintic drug used for intestinal tapeworm infections; clean safety history**
- **Low oral bio-availability with minimal systemic exposure**
  - Pharmacology ideal for local bowel disease; not absorbed from GI tract
- **Niclosamide inhibits pro-inflammatory pathways**
  - Mechanism of action is to impair oxidative phosphorylation
  - Non-steroidal anti-inflammatory option
  - Opportunities for combinations with standard of care for multiple indications without systemic immunosuppression
- **Data from Phase 1b study of niclosamide in ulcerative proctitis/proctosigmoiditis (UP/UPS) shows promising results**
  - Clinical remission efficacy of 59% compares favorably to steroids (38-44% remission rate for budesonide)
- **Niclosamide IP portfolio purchased in 2021**
  - Multiple Phase 2 ready IBD indications (UP/UPS, Ulcerative Colitis, Immune-Checkpoint Inhibitor-Associated Colitis)
